

Yoshitomi Town

Sai River Flood / Sediment Disaster Hazard Map

In Yoshitomi Town, 13 locations are designated as Sediment Disaster (Special) Hazard Zones prone to slope collapse. The residents in and around these areas are advised to make early evacuations during heavy rains, etc., given the high possibilities of sediment disasters.

*Sediment disasters may occur even outside the designated areas

- Be alert to precursory phenomena!
- Be especially cautious during heavy rains, typhoons, and earthquakes!
- Evacuate immediately when you sense danger!

(The information on sediment disasters is provided on Page 8 of the Yoshitomi Town DP Handbook.)

Slope Failures

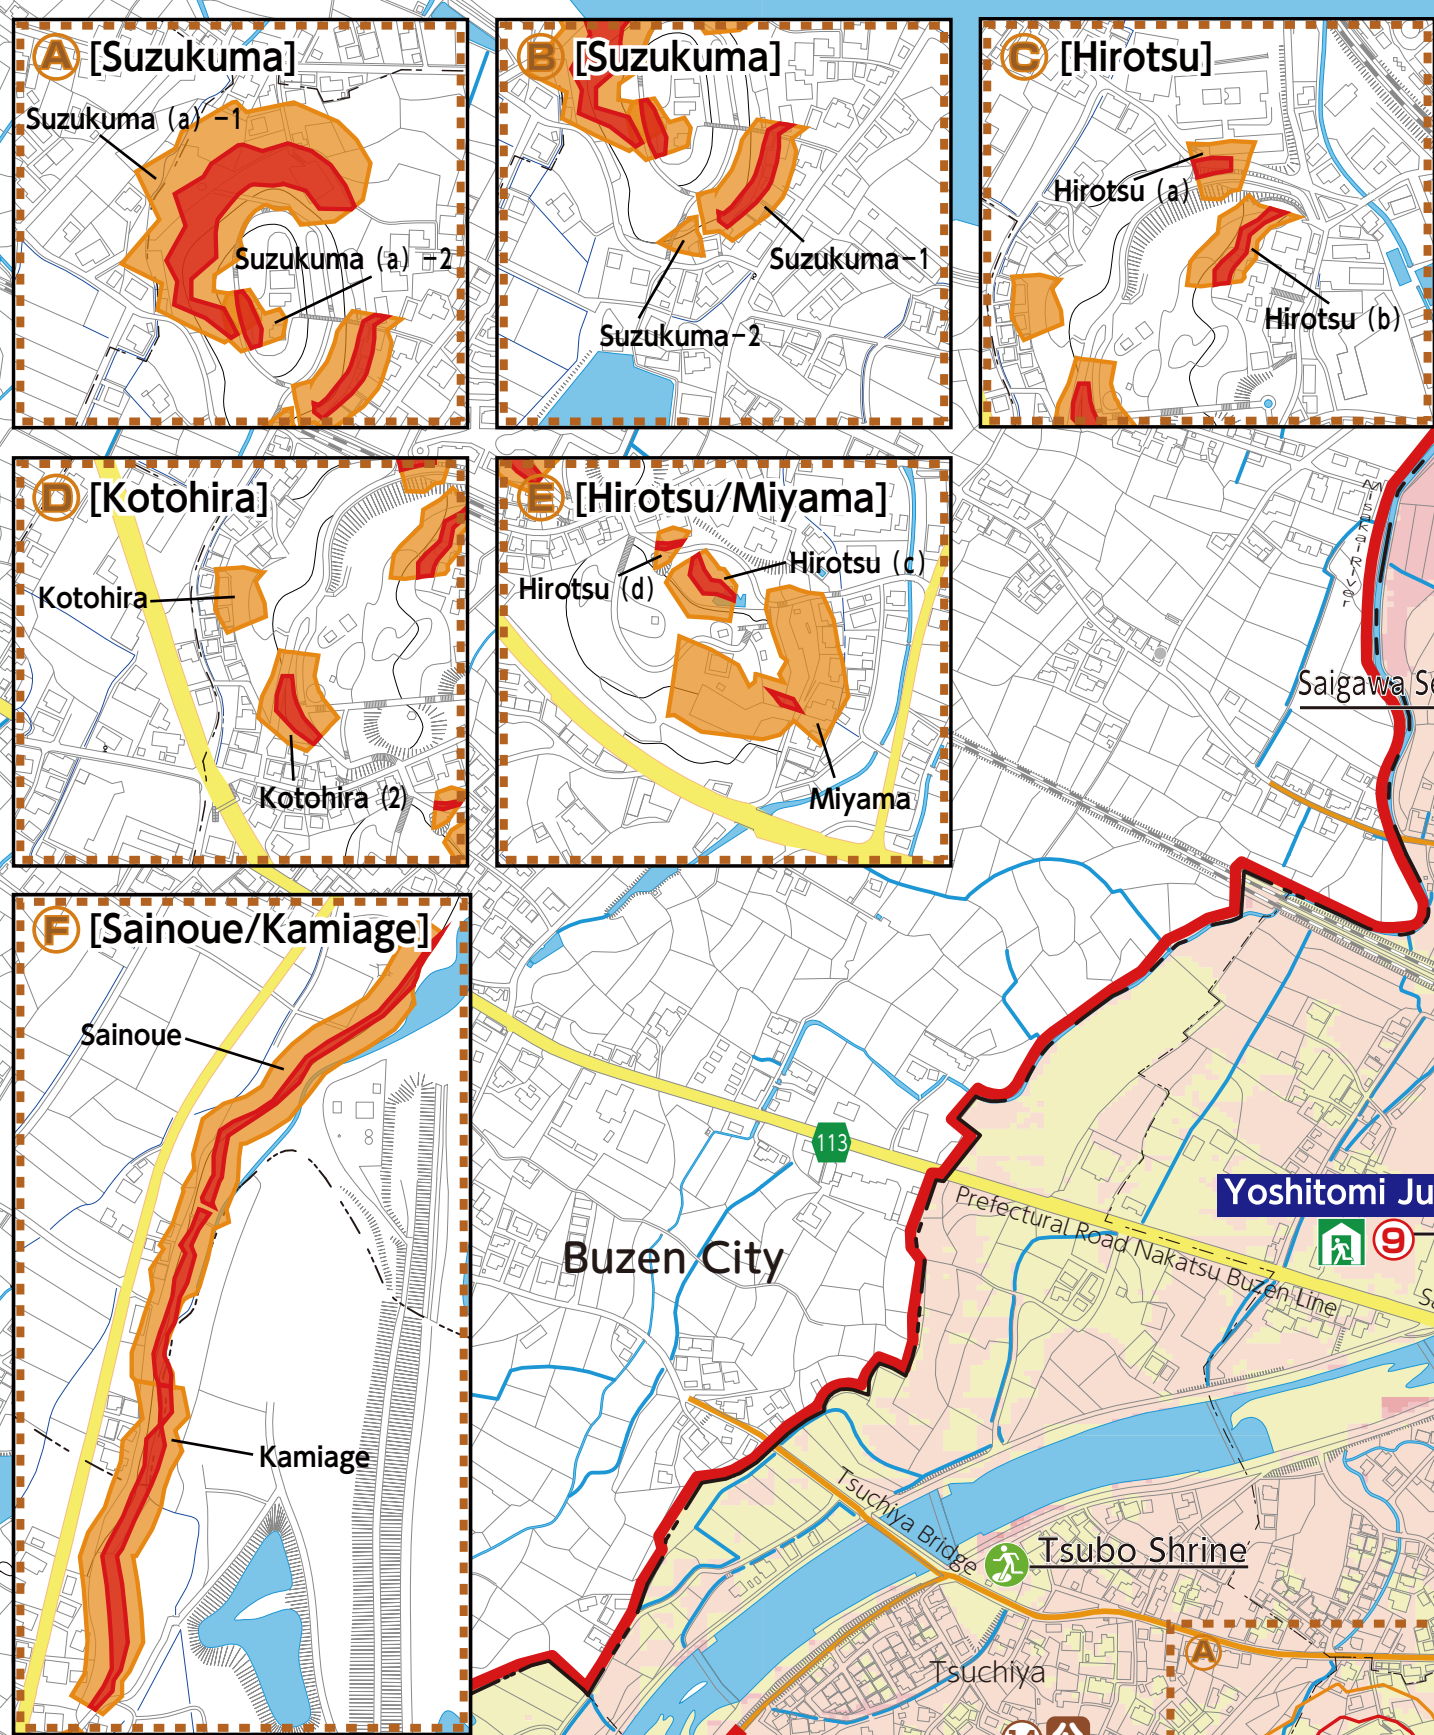

Sediment Disaster Hazard Zones
Areas where sediment disasters can cause injuries to the life and body of the residents.

Sediment Disaster Special Hazard Zones
Areas out of the Sediment Disaster Hazard Zones where sediment disasters can destroy or damage buildings and cause serious injuries to the life and body of the residents.

Sai River System Sai River Anticipated Flood Zone Map

1. Background
 - (1) This Map indicates the Anticipated Flood Zones and floodwater depths in the Water Level Announcement Areas along the Sai River System Sai River in the case of the anticipated rainfalls of the largest scale according to the guidelines provided by Flood Control Act.
 - (2) The prediction of the Anticipated Flood Zones is based on simulations of the Sai River being flooded by the anticipated rainfalls of the largest scale while taking into consideration the current river course and the capacity of existing flood control facilities of the Sai River.
 - (3) The above simulations do not take into consideration the flooding of the tributaries, floods caused by rainfalls exceeding the presupposed level for the simulations, or floods caused by storm surges and drain system flooding in the area. Therefore, floods may occur outside the Anticipated Flood Zones and floodwater depths may differ from the predictions.
2. Basic Information
 - (1) Map prepared by:Fukuoka Prefecture
 - (2) Target Water Level Announcement River:Sai River System Sai River
(Target section) Prefecture control section (from the source to the downstream end of prefecture control section)
 - (3) Rainfall condition:Rainfall of 305 mm within 3 hours in the basin of Sai River
