

Yoshitomi Town Tsunami Hazard Map

Tsunami Hazard Zones

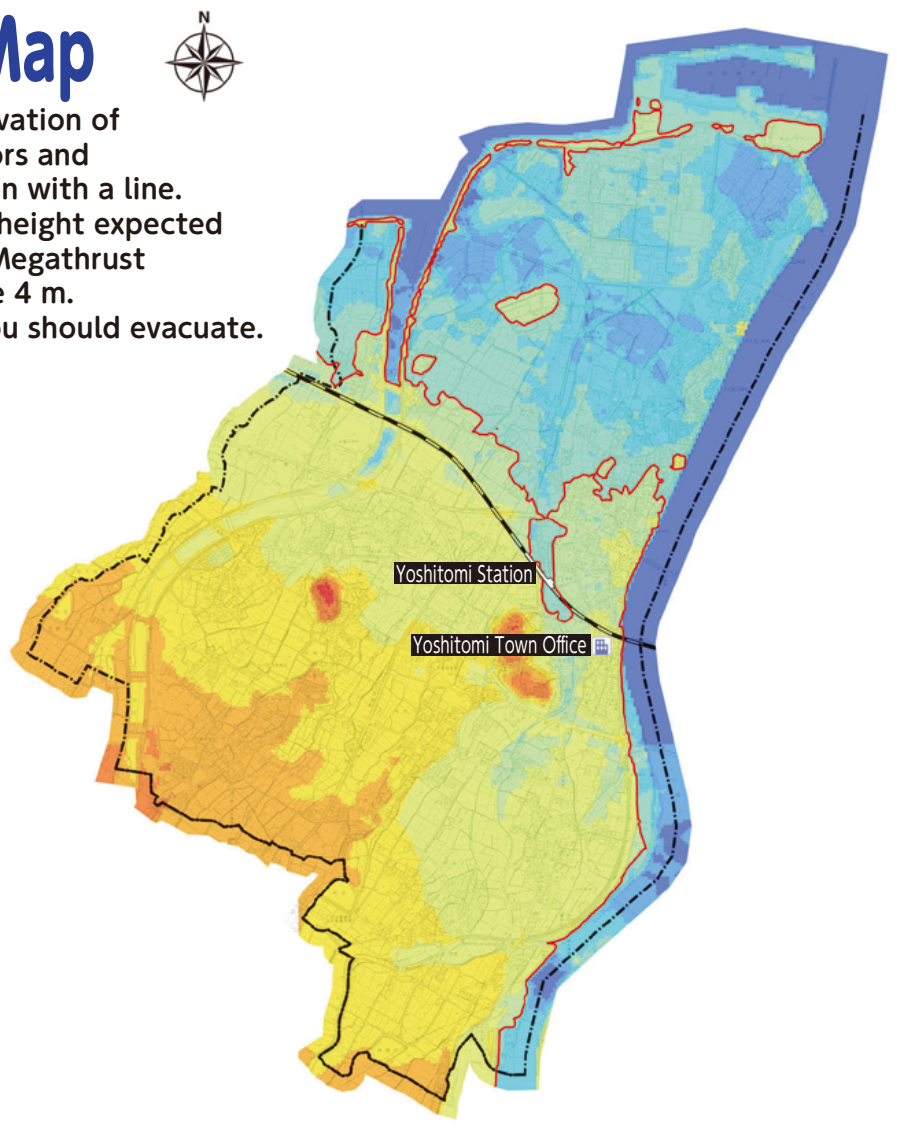

In December 2019, Fukuoka Prefecture designated the areas where tsunamis of the largest scale can cause injuries to life and body of the residents. Tsunamis of the largest scale refer to those that occur quite rarely but those that can surely cause serious damages when they do occur. They are predicted according to the currently available scientific data, but this does not mean that there is no possibility of larger tsunamis. Depending on geographic features and building designs, floods may occur outside the predicted area and floodwater depths might be larger.
